

DATA BUOY MONTHLY REPORT

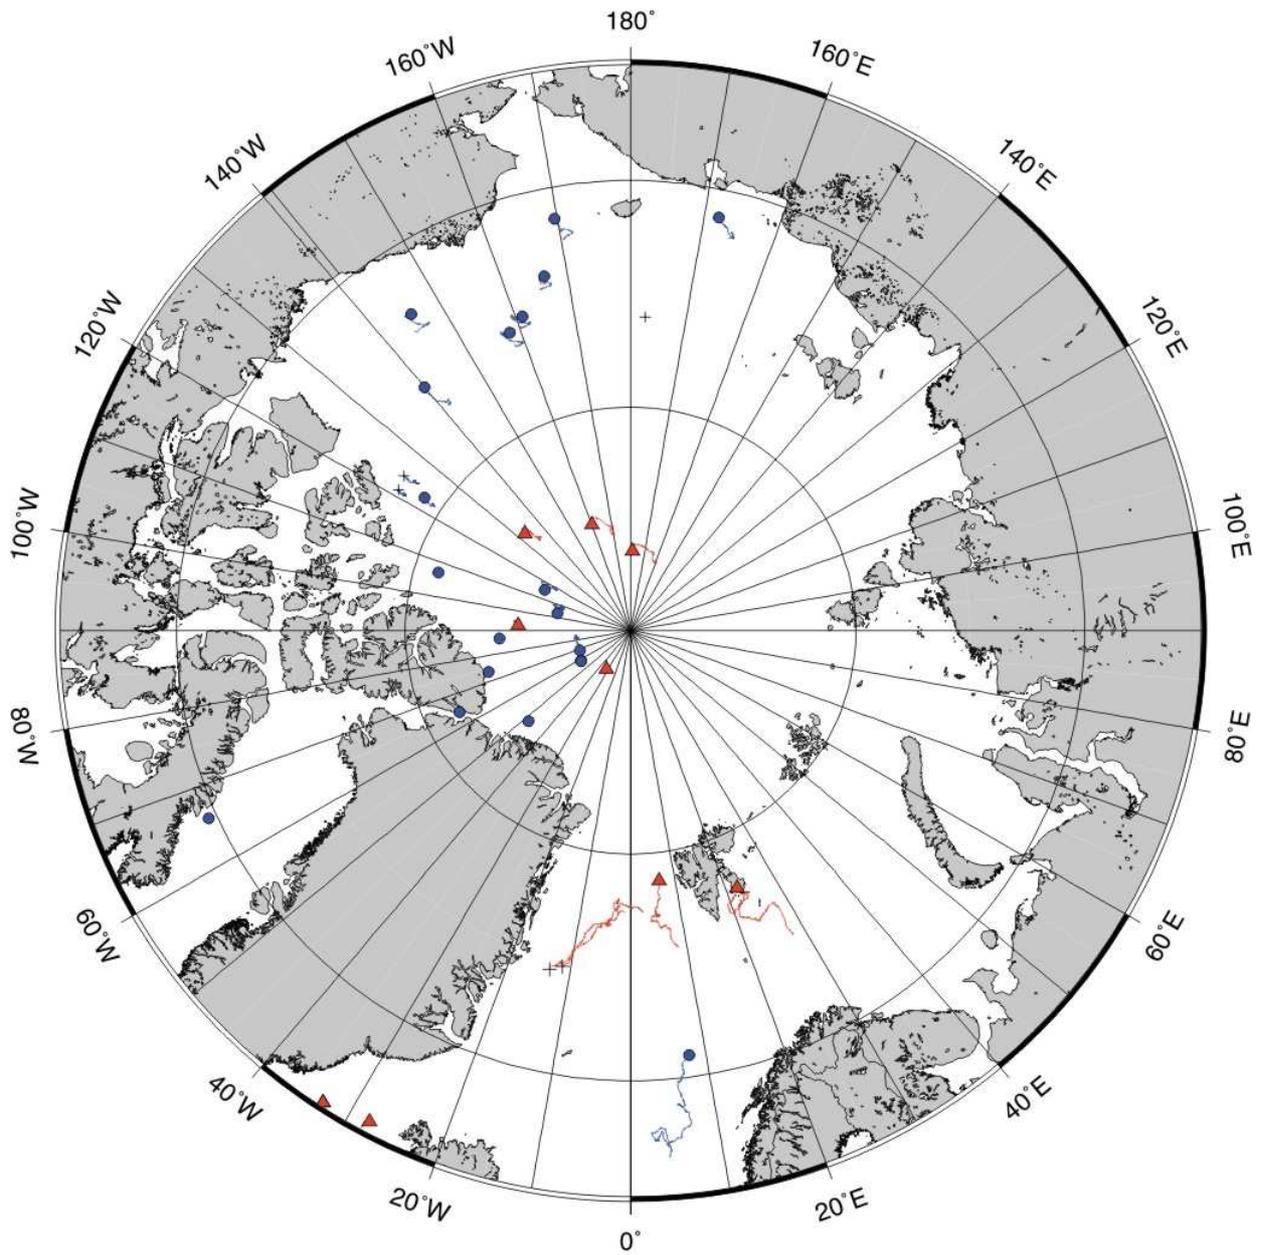

January 2012

January 2012 - Operating data buoys in the North Atlantic
Drifting buoy trajectories: E-SURFMAR (red), others (blue)
Moored buoy positions (black)

January 2012 - Operating data buoys in the Mediterranean Sea
Drifting buoy trajectories and moored buoy positions

January 2012 - Drifting buoy trajectories in Arctic Ocean and adjacent seas: E-SURFMAR (red), others (blue)

DRIFTING BUOYS

Network status

By the end of January, only **66 drifting buoys**, reporting air pressure or wind at least onto the GTS, were in operation in the EUCOS area, in the frame of E-SURFMAR. Out of these, 52 were E-SURFMAR funded Iridium SVP-Bs.

The remaining buoys were 13 Argos drifters owned by NOAA and upgraded with barometers by E-SURFMAR and one Iridium SVP-B drifter operated by Environment Canada.

In addition, one ICEB buoy and three SVP-B drifters out of the six deployed by RV Polarstern in summer were in operation in the Arctic.

Information about the availability of buoys for future deployments may be get from the E-SURFMAR wikisite (working area) at: http://esurfmar.meteo.fr/wikisurf-wa/index.php/Availability_of_drifting_buoys

As during the previous months, the number of buoys which failed in January was very high. The deployment of buoys having a size of 16" in diameter - instead of 14" - is continuing. One of the buoy which did not emit after its deployment by Reykjavoss in December started to emit on the 17th of January.

Air pressure measurements were released back onto the GTS for buoy WMO 4400777 at the beginning of February after realizing they seem correct now.

The GTS data transmission of Iridium buoys - ensured by Meteo-France -, did not suffered from any interruption or delay in January.

Drifting buoys - New deployments

E-SURFMAR DB Monthly Report January 2012

Buoy-QC statistics from Meteo-France model outputs

Datend : Date of the last value received on GTS
Recvd : Total number of values received on GTS
GE : Number of Gross Errors (excluded from bias and sd computations)
bias : Mean differences between observation values and co-located model output values
Std : Standard deviation of differences

Air Pressure (hPa), drifting buoys, January 2012

Comments on QC statistics :

Air pressure

1. Metocean Iridium buoy WMO **6300636** reported wrong pressure values onto the GTS before the transmission was stopped for this parameter on the 9th of January. It is also the case for Metocean Iridium buoy WMO **6300637** probably caught by sea ice.
2. Metocean Iridium WMO **4400624**, **6200714** and **6300635** reported wrong pressure values temporarily. The GTS transmission was not stopped for them.
3. Two other Metocean Iridium buoys (WMO **4400766** and **4400776**) reported wrong pressure values at the end of their lives..

Air temperature

4. As usually seen on ICEB buoys, air temperature observations differ from model outputs in the Arctic. This was the case for buoy WMO **2500619** in January (bias = 6.2°C, standard deviation = 5.0 °C).

Wind

5. Wind direction measurements failed on Lion moored buoy (WMO **6100002**) at the beginning of December. The GTS transmission was stopped for this parameter. Some abnormal calm winds had been reported till the 13th of January. The buoy should be replaced within a few weeks.
