

## DATA BUOY MONTHLY REPORT

February 2012

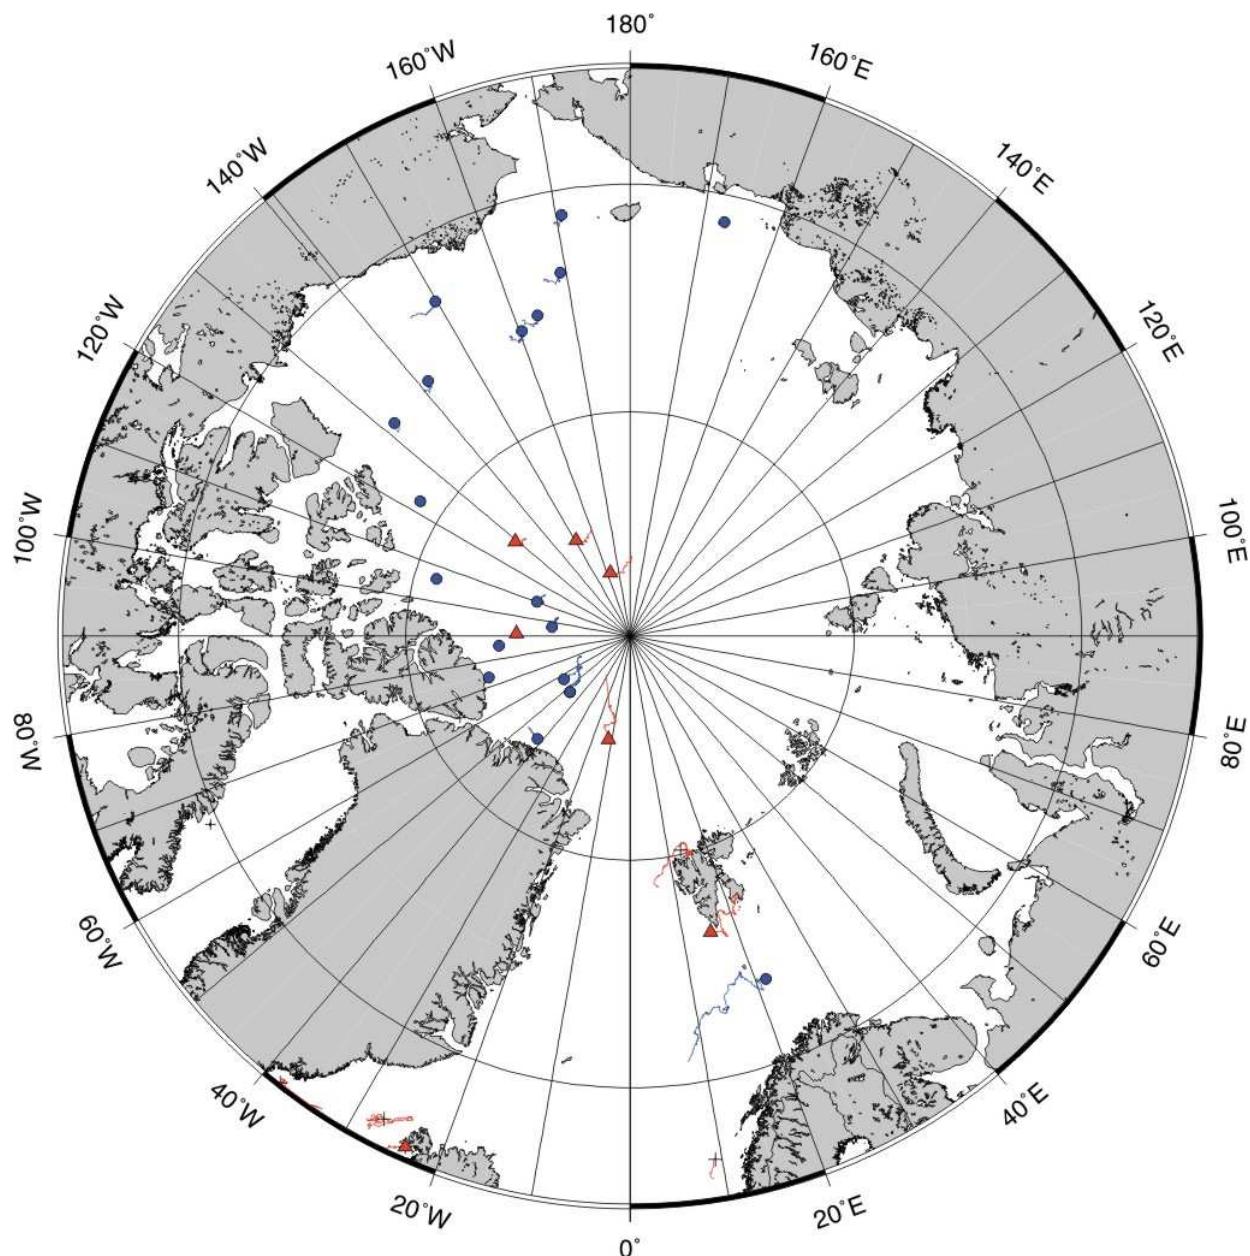

February 2012 - Operating data buoys in the North Atlantic  
Drifting buoy trajectories: E-SURFMAR (red), others (blue)  
Moored buoy positions (black)

**E-SURFMAR DB Monthly Report**  
**February 2012**

February 2012 - Operating data buoys in the Mediterranean Sea  
Drifting buoy trajectories and moored buoy positions

**E-SURFMAR DB Monthly Report**  
**February 2012**

February 2012 - Drifting buoy trajectories in Artic Ocean  
and adjacent seas: E-SURFMAR (red), others (blue)

# E-SURFMAR DB Monthly Report

## February 2012

### DRIFTING BUOYS

#### Network status

By the end of February, **74 drifting buoys**, reporting air pressure or wind at least onto the GTS, were in operation in the EUCOS area, in the frame of E-SURFMAR. This is 8 more than for last month despite the deployment of 25 new buoys. However, the trend has turned positive. Out of the buoys in operation, 62 were E-SURFMAR funded Iridium SVP-Bs and 33 out of them were from the new series – deployed since last December and having an expected battery lifetime of 15 months.

The percentage of GTS buoy data received less than 100 minutes after the observation time has been definitely higher than the target of 95%. This of data arriving within 50 minutes should reach the target of 90% soon.

The remaining buoys were 11 Argos drifters owned by NOAA and upgraded with barometers by E-SURFMAR and one Iridium SVP-B drifter operated by Environment Canada.

In addition, one ICEB buoy and three SVP-B drifters out of the six deployed by RV Polarstern in summer were in operation in the Arctic.

Information about the availability of buoys for future deployments may be get from the E-SURFMAR wikisite (working area) at: [http://esurfmar.meteo.fr/wikisurf-wa/index.php/Availability\\_of\\_drifting\\_buoys](http://esurfmar.meteo.fr/wikisurf-wa/index.php/Availability_of_drifting_buoys)

Air pressure measurements were released back onto the GTS for buoys WMO 4400765 and 6200551 at the beginning of March after realizing they seem correct now.

The GTS data transmission of Iridium buoys - ensured by Meteo-France -, did not suffered from any interruption or delay in February.

#### Drifting buoys - New deployments

### Abbreviations

---

WMO	: WMO id.
Argos	: Argos id.
Typ	: Buoy type - first character : Manufacturer (C = ConMar , M = Metocean, T = Technocean, Y = Marlin-Yug...) - second character : Main type (F = FGGE, S = SVP) - third character : Sub type (B = barometer buoy, W = Wind buoy, S = Salinity buoy)
Ow	: Buoy owner (country code or EU for EUCOS)
Owner	: Buoy owner for non EUCOS buoys
Nobs	: number of GTS reports received at Meteo-France
Parameters	(X = OK, S = stopped, - = not measured) : Wi : Wind AT : Air Temperature AP : Air Pressure dP : Air pressure tendancy ST : Sea surface Temperature Wa : Wave period and height

# E-SURFMAR DB Monthly Report

## February 2012

Ws : Wave spectra  
 Dr : Drogue presence  
 Sb : Subsurface temperature  
 U : Relative humidity  
 SS : Sea surface Salinity  
 O : Origin of the reports (T = Argos Toulouse, L = Argos Largo, O = Other)  
 Start\_end : first and last dates of the month for which GTS data were received at Meteo-France  
 Lat : Latitude of the latest position  
 Lon : Longitude of the latest position  
 Age : Age of the buoy (days)  
 DepDate : Date of deployment  
 DepLat : Latitude of deployment  
 Dep\_Lon : Longitude of Deployment  
 From : Harbour of departure

Definition : An operating drifting buoy is a buoy providing at least air pressure or wind (direction and velocity) data.

---

# E-SURFMAR DB Monthly Report

## February 2012

### Buoy-QC statistics from Meteo-France model outputs

*Datend*: Date of the last value received on GTS

*Recv*: Total number of values received on GTS

*GE*: Number of Gross Errors (excluded from bias and sd computations)

*bias*: Mean differences between observation values and co-located model output values

*Std*: Standard deviation of differences

#### Air Pressure (hPa), drifting buoys, February 2012

### Comments on QC statistics :

#### Air pressure

1. Metocean Iridium buoys WMO **4400606**, **4400624**, **4400765**, **6200551**, **6300640**, **6400521** and **6400617** reported wrong pressure values onto the GTS before the transmission was stopped for this parameter. Pressure data were rehabilitated for buoy WMO **4400765** and **6200551** at the beginning of March after they were found reliable back.
2. Metocean Iridium WMO **4400602**, **4400604**, **4400744**, **6300635** and **6400612** reported wrong pressure values temporarily. The GTS transmission was not stopped for them.
3. Spanish moored buoy WMO **6100196** also reported wrong pressure values before the transmission was stopped for this parameter.

#### Air temperature

4. As usually seen on ICEB buoys, air temperature observations differ from model outputs in the Arctic. This was the case for buoy WMO **2500619** in February (bias = 4.1°C, standard deviation = 5.1 °C).
5. One air temperature sensor failed on Lion moored buoy (WMO **6100002**) . The second sensor is now used for GTS transmission.
6. Spanish moored buoy WMO **6100417** has been reporting biased air temperature values since the end of November. GTS transmission should be stopped at the beginning of March for this parameter.
7. Brittany moored buoy (WMO **6200163**) presents an increasing bias in air temperature: 1°C in January, 2°C in February.

#### Wind

8. Spanish moored buoy WMO **6200025** reported wrong wind data before the transmission was stopped for this parameter.

## E-SURFMAR DB Monthly Report February 2012

9. Irish moored buoy WMO **6200094** (M5) reported some wrong wind data in February. However, they were fine back at the end of the month.
