## April 2012

### DRIFTING BUOYS

#### Network status

By the end of April, **67 drifting buoys**, reporting air pressure or wind at least onto the GTS, were in operation in the EUCOS area, in the frame of E-SURFMAR. Out of the buoys in operation, 57 were E-SURFMAR funded Iridium SVP-Bs. The remaining buoys were 10 Argos drifters owned by NOAA and upgraded with barometers by E-SURFMAR.

The percentage of GTS buoy data received less than 50 minutes after the observation time should reach the target of 90% soon.

In addition, one ICEB buoy and two SVP-B drifters out of the six deployed by RV Polarstern in summer were in operation in the Arctic.

Information about the availability of buoys for future deployments may be get from the E-SURFMAR wikisite (working area) at: [http://esurfmar.meteo.fr/wikisurf-wa/index.php/Availability\\_of\\_drifting\\_buoys](http://esurfmar.meteo.fr/wikisurf-wa/index.php/Availability_of_drifting_buoys)

Air pressure measurements were released back onto the GTS for buoys WMO 4400612, 4400614, 4400835, 4400885 and 6400522 in May after realizing they seemed correct back. Excepted buoy WMO 4400612, this appeared suitable indeed.

The GTS data transmission of Iridium buoys - ensured by Meteo-France -, suffered from a slight trouble on April 2<sup>nd</sup> (2-3 observations out of the 24 hourly of that day were delivered in late or were not delivered for most of the buoys).

### Comments on QC statistics :

#### Air pressure

1. Metocean Iridium buoys WMO **4400614**, **4400624** and **6400608** reported wrong pressure values onto the GTS before the transmission was stopped for this parameter. Pressure data were rehabilitated for buoys **WMO 4400612**, **4400614**, **4400835**, **4400885** and **6400522** in May after they were found reliable back.
2. Metocean Iridium buoy WMO **4400604** reported wrong pressure values temporarily. The GTS transmission was not stopped for it.
3. It seems that air pressure values reported by Spanish moored buoy WMO 6100196 present a systematic bias of -1.2 hPa (-1.1 hPa in March).

#### Air temperature

4. As usually seen on ICEB buoys, air temperature observations differ from model outputs in the Arctic. This was the case for buoy WMO **2500619** in April: bias of 5.1 °C with standard deviation of 4.1 °C.
5. Irish moored buoy M6 (WMO **6200095**) reported a few abnormal calm winds before this parameter was removed from GTS.
