DRIFTING BUOYS

Network status

By the end of September, **130 Drifting buoys**, reporting air pressure onto the GTS, were in operation in the frame of E-SURFMAR. Out of these, 95 were E-SURFMAR funded Iridium SVP-Bs, including 12 in the Arctic and 11 HRSST-2 buoys. The remaining buoys were: one ICEB buoy in the Arctic, 33 Iridium drifters owned by NOAA and upgraded with barometers by E-SURFMAR, and one Iridium drifter operated by Environment Canada.

Out of these, one buoy beached in Iceland (WMO 6400619) reports reliable pressure data onto the GTS. Two prototypes of Iridium SVP-Bs (WMO 6200507 and 6200508) built by DBI and owned by NOAA are also considered as being part of E-SURFMAR network.

A few Iridium buoys are emitting sporadically. In September, this was again the case for Metocean buoy WMO 4400746. The GTS transmission of air pressure was rehabilitated for Metocean SVP-B WMO 4400617 (02/09) and 6400623 (18/09) after noticing they were reliable back.

Information about the availability of buoys for future deployments may be get from the E-SURFMAR wikisite (working area) at: http://esurfmar.meteo.fr/wikisurf-wa/index.php/Availability_of_drifting_buoys

Besides E-SURFMAR buoys, 47 drifting buoys were reporting at least air pressure or wind observations from the EUMETNET area of interest. Out of these, 7 were reporting Sea Surface Salinity, some in the frame of Spurs/Strasse campaign (validation of SMOS and Aquarius remote SSS measurements).

E-SURFMAR DB Monthly Report September 2013

Comments on QC statistics :

In general, the networks performed very well in September...

Air pressure

1. Metocean buoys WMO **2500618** and **2500649**, deployed in the Arctic, reported wrong pressure values in September before the GTS transmission was stopped for this parameter. They are drifting at the boundary between sea ice and open ocean: a humid cold area. It is possible their air intake was closed by ice.
2. Metocean buoys WMO **2500650** and **2500651**, also deployed in the same area, reported a few wrong pressure values in September but not enough to stop the GTS transmission for this parameter. This was also the case for buoy WMO **6200556**.
3. Metocean buoys WMO **4400623** and **6400608** also reported wrong pressure values in September for unknown reason (first one) or after being beached on a small island in Lofoten archipelago (second one). The GTS transmission was stopped for this parameter.
4. Metocean buoy WMO **4400772** reported biased pressure values onto the GTS after it was beached in Ireland. The transmission was stopped a few days later.
5. Air pressure values reported by Italian moored buoy WMO **6100215** seem systematically biased for about 2 hPa.

Air temperature

6. Air temperature values reported by Spanish moored buoy WMO **6100197** seem systematically biased for about -3.5°C.
