

**VOS MONTHLY REPORT**  
February 2013

In February 2013, **234 manned and 1471 automated observations** were received in average per day from EUMETNET ships operating in the EUCOS area of interest (355 conventional VOS and 113 Shipborne Automatic Weather Stations (S-AWS)).

**EUCOS Automated Weather Stations (AWS)**

During the month, **nine AWS stations**, out of the thirteen funded by EUCOS, reported their observations onto the GTS.

Ident.	Ship's name	CC	Last rep.	nobs	Remark
BATEU00	Mary Arctica	DK	20130219	345	
BATEU01	Toronto Express	UK	20130228	455	
BATEU02	Celtic Explorer	IR	20130228	426	
BATEU03	Celtic Voyager	IR	20130228	662	
BATEU04	Nuka Arctica	DK			Damaged with icing on 4 <sup>th</sup> Dec. 2012
BATEU05	Irena Arctica	DK	20130228	387	
BATEU06	Montreal Express	UK	20130228	363	
BATEU07	Mississauga Exp.	UK	20130228	390	
BATEU08	Naja Arctica	DK	20130228	393	
BATEU09	Urania	FR	20130228	381	

**Six BaRos AWS stations** installed on E-ASAP ships **and eleven** installed on other ships or on Cycfos moored buoy reported their data onto the GTS in February. Three stations are BaRos+. In addition to air pressure, they normally report air temperature, air humidity and wind. In order to correctly measure the wind, the sonic anemometer must be well exposed to the wind. It seems this is not the case here. Wind observations have been removed from the GTS for the 3 BaRos+ AWS on 6<sup>th</sup> February meanwhile better exposures are found.

## E-SURFMAR VOS Monthly Report February 2013

### Inmarsat-C Half Compression deployment

KNMI continued to deploy the half compression technique on their conventional VOS. Raw data messages sent through Inmarsat-C (Borum LES - SAC 431) are processed at Meteo-France for GTS transmission. In February, 28 conventional VOS reported a total of **960** half compressed messages.

### Useful links

The working area of the E-SURFMAR website <http://esurfmar.meteo.fr/wikisurf-wa/> is the place where you can get a lot of informations about the programme in general and its components (data buoys and VOS). Ask the E-SURFMAR Programme Manager [Pierre.Blouch@meteo.fr](mailto:Pierre.Blouch@meteo.fr) for the password in case you forgot it. Notice you can participate in providing your own information to the PM or in writing directly on the website. This latest facility, easy to handle, may be provided to volunteers.

The E-SURFMAR metadata database address is <http://esurfmar.meteo.fr/doc/vosmetadata/> . This database contains the most recently updated WMO Pub47 metadata of the global WMO VOS fleet. Every day, extracts from the database are made available at <ftp://esurfmar.meteo.fr/pub/Pub47/> .

Monthly QC statistics and other quality control tools are available at:

<http://www.meteo.shom.fr/qctools/>

A “blacklist” of EUMETNET VOS reporting dubious air pressure values is displayed at:

<http://www.meteo2.shom.fr/qctools/sevblackap.htm>

VOS operators (focal points) and PMOs are invited to check whether their ships are not in this list and to take appropriate actions to correct possible problems if any.

A list of European AWS is available at [http://www.meteo2.shom.fr/qctools/last-report-list\\_surfmar.htm](http://www.meteo2.shom.fr/qctools/last-report-list_surfmar.htm). Updated every day, this list gives for each station: its operating country; the date of its first report (after September 2004); the date of its last report - in red for those which have not reported for more than 2 weeks - ; etc...

The official E-SURFMAR webpages are henceforth on the EUCOS Web site (<http://www.eucos.net/>). Choose “EUCOS Networks” then “E-SURFMAR” in the left menu.
