

VOS MONTHLY REPORT
October 2013

In October 2013, **254 manned and 1861 automated observations** were received in average per day from EUMETNET ships operating in the EUMETNET observation area of interest (374 conventional VOS and 124 Shipborne Automatic Weather Stations (S-AWS)).

EUMETNET Automated Weather Stations (AWS)

During the month, **ten AWS stations**, out of the thirteen funded by EUMETNET, reported their observations onto the GTS.

Ident.	Ship's name	CC	Last rep.	nobs	Remark
BATEU00	Mary Arctica	DK	20131031	492	
BATEU01	Toronto Express	UK	20131031	495	
BATEU02	Celtic Explorer	IR	20131031	589	
BATEU03	Celtic Voyager	IR	20131031	698	
BATEU04	Nuka Arctica	DK	20131031	443	
BATEU05	Irena Arctica	DK	20131031	315	
BATEU06	Montreal Express	UK	20131030	489	
BATEU07	Mississauga Exp.	UK	20130723		Failed - No report in October
BATEU08	Naja Arctica	DK	20131031	495	
BATEU09	Urania	FR	20131031	452	
BATEU10	Cap Finisterre	FR	20131031	433	Installed on October 8 th

Six BaRos AWS stations installed on E-ASAP ships **and twelve** installed on other ships or on Cycfos moored buoy reported their data onto the GTS in October. Three stations are BaRos+. In addition to air pressure, they normally report air temperature, air humidity and wind. In order to correctly measure the wind, the sonic anemometer must be well exposed. It seems this is not the case here for two out of them. Wind observations have been removed from the GTS for these meanwhile better exposures are found. The observations of the Cycfos buoy (WMO 120050) are no longer counted among BaRos S-AWS observations. The status of this station is henceforth reported in the data buoy report.

Inmarsat-C Half Compression deployment

KNMI continued to deploy the half compression technique on their conventional VOS. Raw data messages sent through Inmarsat-C (Borum LES - SAC 431) are processed at Meteo-France for GTS transmission. In October, 25 conventional VOS reported a total of **916** half compressed messages.

Useful links

The working area of the E-SURFMAR website <http://esurfmar.meteo.fr/wikisurf-wa/> is the place where you can get a lot of informations about the programme in general and its components (data buoys and VOS). Ask the E-SURFMAR Programme Manager Pierre.Blouch@meteo.fr for the password in case you forgot it. Notice you can participate in providing your own information to the PM or in writing directly on the website. This latest facility, easy to handle, may be provided to volunteers.

The E-SURFMAR metadata database address is <http://esurfmar.meteo.fr/doc/vosmetadata/> . This database contains the most recently updated WMO Pub47 metadata of the global WMO VOS fleet. Every day, extracts from the database are made available at <ftp://esurfmar.meteo.fr/pub/Pub47/> .

Monthly QC statistics and other quality control tools are available at:

<http://www.meteo.shom.fr/qctools/>

A “blacklist” of EUMETNET VOS reporting dubious air pressure values is displayed at:

<http://www.meteo2.shom.fr/qctools/sevblackap.htm>

VOS operators (focal points) and PMOs are invited to check whether their ships are not in this list and to take appropriate actions to correct possible problems if any.

A list of European AWS is available at http://www.meteo2.shom.fr/qctools/last-report-list_surfmar.htm. Updated every day, this list gives for each station: its operating country; the date of its first report (after September 2004); the date of its last report - in red for those which have not reported for more than 2 weeks - ; etc...

The official E-SURFMAR webpages are henceforth on the EUCOS Web site (<http://www.eucos.net/>). Choose “*EUCOS Networks*” then “*E-SURFMAR*” in the left menu.
