

## VOS MONTHLY REPORT June 2014

In June 2014, **242 manned and 1978 automated observations** were received in average per day from EUMETNET ships operating in the EUMETNET observation area of interest (340 conventional VOS and 128 Shipborne Automatic Weather Stations (S-AWS)).

Since mid-February, FM13 messages received at KNMI through Inmarsat-C (Borum station operated by Stratos), or by email, are forwarded to Meteo-France. There, they are transmitted onto the GTS under headers S[M,I,N]V[A-Z]14 LFPW. In parallel they are converted in BUFR and transmitted in that format.

### EUMETNET Automated Weather Stations (AWS)

During June, **ten AWS stations** installed onboard ships reported their observations onto the GTS.

Ident.	Ship's name	CC	Last rep.	nobs	Remark
BATEU00	Mary Arctica	DK	20140630	447	
BATEU01	Toronto Express	UK	20140628	450	
BATEU02	Celtic Explorer	IR	20140630	273	
BATEU03	Celtic Voyager	IR	20140630	588	
BATEU04	Nuka Arctica	DK	20140531		Ship not operating in June
BATEU05	Irena Arctica	DK	20140630	313	
BATEU06	Montreal Express	UK	20140630	442	
BATEU07	Mississauga Exp.	UK	20130630	439	
BATEU08	Naja Arctica	DK	20140629	482	
BATEU09	Urania	FR	20140630	322	
BATEU10	Cap Finisterre	FR	20140630	626	

**Seven BaRos AWS** stations installed on E-ASAP ships **and nine** installed on other ships or on Cycfos moored buoy reported their data onto the GTS in June. Three stations are BaRos+. In addition to air pressure, they normally report air temperature, air humidity and wind. In order to correctly measure the wind, the sonic anemometer must be well exposed. It seems this is not the case here for two out of them. Wind observations have been removed from the GTS for these meanwhile better exposures are found.

Ident.	Ship's name	CC	Last rep.	nobs	Remark
BAREU00	Atlantic Compass	EU	20140630	538	
BAREU04	Alantic Companion	EU	20140630	596

BAREU74	Ayse	IT	20140630	230	

### **Inmarsat-C Half Compression deployment**

KNMI continued to deploy the half compression technique on their conventional VOS. Raw data messages sent through Inmarsat-C (Borum LES - SAC 431) are processed at Meteo-France for GTS transmission. Met Office also started the deployment of the technique on UK recruited VOS. In June, 16 conventional VOS reported a total of **698** half compressed messages.

### **Useful links**

The working area of the E-SURFMAR website <http://esurfmar.meteo.fr/wikisurf-wa/> is the place where you can get a lot of informations about the programme in general and its components (data buoys and VOS). Ask the E-SURFMAR Programme Manager [Pierre.Blouch@meteo.fr](mailto:Pierre.Blouch@meteo.fr) for the password in case you forgot it. Notice you can participate in providing your own information to the PM or in writing directly on the website. This latest facility, easy to handle, may be provided to volunteers.

The E-SURFMAR metadata database address is <http://esurfmar.meteo.fr/doc/vosmetadata/> . This database contains the most recently updated WMO Pub47 metadata of the global WMO VOS fleet. Every day, extracts from the database are made available at <ftp://esurfmar.meteo.fr/pub/Pub47/> .

Monthly QC statistics and other quality control tools are available at:  
<http://www.meteo.shom.fr/qctools/>

A “blacklist” of EUMETNET VOS reporting dubious air pressure values is displayed at:

<http://www.meteo2.shom.fr/qctools/sevblackap.htm>

VOS operators (focal points) and PMOs are invited to check whether their ships are not in this list and to take appropriate actions to correct possible problems if any.

A list of European AWS is available at [http://www.meteo2.shom.fr/qctools/last-report-list\\_surfmar.htm](http://www.meteo2.shom.fr/qctools/last-report-list_surfmar.htm). Updated every day, this list gives for each station: its operating country; the date of its first report (after September 2004); the date of its last report - in red for those which have not reported for more than 2 weeks - ; etc...

The official E-SURFMAR webpages may be seen at <http://www.eumetnet.eu/e-surfmar/>.
