

VOS MONTHLY REPORT May 2015

In May 2015, **224 manned and 1854 automated observations** were received in average per day from EUMETNET ships operating in the EUMETNET observation area of interest (314 conventional VOS and 120 Shipborne Automatic Weather Stations (S-AWS)).

Since mid-February 2014, FM13 messages received at KNMI through Inmarsat-C (Borum station operated by Stratos), or by email, are forwarded to Meteo-France. There, they are transmitted onto the GTS under headers S[M,I,N]V[A-Z]14 LFPW. In parallel they are converted in BUFR and transmitted in that format.

EUMETNET Automated Weather Stations (AWS)

During May, **eight BaTos AWS stations** installed onboard ships reported their observations onto the GTS.

Ident.	Ship's name	CC	Last rep.	nobs	Remark
BATEU00	Mary Arctica	DK	20150531	301	
BATEU01	Toronto Express	UK	20150531	599	
BATEU02	Celtic Explorer	IR	20150531	547	
BATEU03	Celtic Voyager	IR	20140930		Ship not operating since October 2014
BATEU04	Nuka Arctica	DK	20150531	394	
BATEU05	Irena Arctica	DK	20150329		Ship not operating in May
BATEU06	Montreal Express	UK	20150531	534	
BATEU07	Mississauga Exp.	UK	20150531	431	
BATEU08	Naja Arctica	DK	20150511	164	
BATEU09	Urania	FR	20141130		Ship not operating in May
BATEU10	Cap Finisterre	FR	20150531	647	

Seven BaRos AWS stations installed on E-ASAP ships **and ten** installed on other ships reported their data onto the GTS in May. Four stations were BaRos+. In addition to air pressure, they normally report air temperature, air humidity and wind. In order to correctly measure the wind, the sonic anemometer must be well exposed. It seems this is not the case here for two out of them. Wind observations have been removed from the GTS for these meanwhile better exposures are found.

BAREU75	Horace A	IT	20150531	628	BaRos+ (MetPak-II) - Acceptable wind reports

Inmarsat-C Half Compression technique

Raw data messages sent through Inmarsat-C (Borum LES - SAC 431) are processed at Meteo-France for GTS transmission. Met Office also started the deployment of the technique on UK recruited VOS. In May, 9 conventional VOS reported a total of **222** half compressed messages.

Useful links

The working area of the E-SURFMAR website <http://esurfmar.meteo.fr/wikisurf-wa/> is the place where you can get a lot of informations about the programme in general and its components (data buoys and VOS). Ask the E-SURFMAR Programme Manager Pierre.Blouch@meteo.fr for the password in case you forgot it. Notice you can participate in providing your own information to the PM or in writing directly on the website. This latest facility, easy to handle, may be provided to volunteers.

The E-SURFMAR metadata database address is <http://esurfmar.meteo.fr/doc/vosmetadata/> . This database contains the most recently updated WMO Pub47 metadata of the global WMO VOS fleet. Every day, extracts from the database are made available at <ftp://esurfmar.meteo.fr/pub/Pub47/> .

Monthly QC statistics and other quality control tools are available at:
<http://www.meteo.shom.fr/qctools/>

A “blacklist” of EUMETNET VOS reporting dubious air pressure values is displayed at:
<http://www.meteo2.shom.fr/qctools/sevblackap.htm>

VOS operators (focal points) and PMOs are invited to check whether their ships are not in this list and to take appropriate actions to correct possible problems if any.

A list of European AWS is available at http://www.meteo2.shom.fr/qctools/last-report-list_surfmar.htm. Updated every day, this list gives for each station: its operating country; the date of its first report (after September 2004); the date of its last report - in red for those which have not reported for more than 2 weeks - ; etc...

The official E-SURFMAR webpages may be seen at <http://www.eumetnet.eu/e-surfmar/>.
